

RISK vs. REWARD – One Sheet

How much would you bet you're right?

1-Hour Studio Game Show

Format: Two independent contestants per hour; solo or Couples Edition

Prize Range: \$0.01 to \$1,000,000

LOGLINE

Contestants answer trivia questions—but before locking in each answer, they must decide how much they trust their choice. That decision determines how much they can win or lose and shapes their remaining path toward a \$1,000,000 prize.

CONCEPT

RISK vs. REWARD is a trivia game where knowledge is only half the challenge.

For each question, contestants first see the question and four possible answers. Then they use a dynamic RISK/REWARD Slider to set their confidence before locking in both their answer and risk level.

That single decision determines:

- How much they can win if correct.
- How much they can lose if wrong.
- How much of the \$1,000,000 prize potential remains available for the rest of the game.

Higher risk creates greater potential rewards while preserving access to the top prize. Lower risk limits potential losses—but reduces the maximum possible finish.

Every decision reshapes what is still possible.

The screenshot shows the game interface for "RISK vs. REWARD". At the top, the title "RISK vs. REWARD" is displayed in red and green. Below it, the question is: "Question: 1 Category: Landmarks. If you are facing the Mount Rushmore National Memorial, which President is shown on the far right side?". Four multiple-choice options are listed: A) Thomas Jefferson, B) Theodore Roosevelt, C) Abraham Lincoln, and D) George Washington. A slider bar is positioned below the options, with a black dot indicating the chosen risk level. The slider shows a risk of -\$272.47 and a reward of \$329.84. A countdown timer shows 86 seconds. Below the slider, two boxes show the potential outcomes: "If you miss..." and "If you are correct...". The "If you miss..." box shows a current balance of \$533.67, a risk of \$272.47, and a resulting balance of \$261.20. It also shows the minimum possible loss of \$0.01 and the maximum possible loss of \$251,178.56. The "If you are correct..." box shows a current balance of \$533.67, a reward of \$329.84, and a resulting balance of \$863.51. It also shows the minimum possible win of \$0.04 and the maximum possible win of \$830,362.85. A "Lock in Answer" button is at the bottom.

If you miss...		If you are correct...	
You now have:	\$533.67	You now have:	\$533.67
Minus RISK:	\$272.47	Plus REWARD:	\$329.84
You would have:	\$261.20	You would have:	\$863.51
The Least You Can Win:	\$0.01	The Least You Can Win:	\$0.04
The Most You Can Win:	\$251,178.56	The Most You Can Win:	\$830,362.85

HOW IT PLAYS

- Two contestants play separate, independent 12-question games in the standard one-hour format.
- Contestants choose from multiple trivia categories.
- Each question and its four possible answers are revealed before confidence selection.
- A dynamic slider sets the risk and reward for each question.
- Real-time visuals update potential winnings, losses, and best- and worst-case final totals.
- Correct answers increase earnings according to the risk level chosen.
- Incorrect answers reduce earnings according to the risk level chosen.
- One Do-Over lifeline is available during the first six questions. If unused, it becomes a final-question advantage: a choice between two categories.

No walk-away option. Every contestant plays all 12 questions.

Each decision visibly changes the contestant's financial trajectory.

THE STRATEGY

Winning is not just about knowing the answers—it's about knowing how much to trust them.

Contestants may take very different approaches:

- **Conservative:** Protects current earnings but limits the maximum possible prize.
- **Aggressive:** Pursues greater rewards while accepting greater potential losses.
- **Calibrated:** Matches confidence to knowledge and balances risk against the remaining opportunities.

Two equally knowledgeable contestants can finish with dramatically different results based on their confidence decisions.

COUPLES EDITION

Partners play together, jointly deciding on categories, answers, and confidence levels.

This creates negotiation under pressure, where disagreements about certainty can become just as important as the trivia itself.

HOST ROLE

The host guides viewers through the consequences of each decision in real time, turning the game's mathematics into understandable drama.

The host helps audiences see not only whether contestants are right, but what their confidence has won—or cost—they.

WHY IT WORKS

RISK vs. REWARD turns trivia into a test of confidence under pressure.

- Every question combines knowledge and decision-making.
- Viewers compare their own confidence with the contestants'.
- Early decisions shape the entire game.
- Multiple prize levels create a range of meaningful outcomes.
- Real-time visuals make strategy and consequences instantly understandable.
- Two independent contestants create contrasting strategies and personalities.
- Couples Edition adds negotiation, relationship dynamics, and tension.

At its core, the show is not just about answering questions. It's about deciding how much you trust your own answer when money is on the line.

PLAY THE DEMO

Experience a fully interactive prototype of the game.

Players select categories, view questions and answers, and adjust the RISK/REWARD Slider before locking in their decisions. Potential winnings, risk exposure, and remaining prize potential update in real time.

The demo includes multiple question sets and a functional Do-Over lifeline.
