

RISK vs. REWARD

Series Snapshot

RISK vs. REWARD is a high-stakes trivia game show where confidence is as important as knowledge.

Contestants face 12 multiple-choice questions, but answering correctly is only part of the challenge. Before each answer is revealed, they must decide how much they trust their choice using a dynamic Risk/Reward Slider. That decision determines how much they can win—or lose—and influences how much they can still win later in the game.

As the stakes escalate toward the \$1,000,000 top prize, contestants constantly manage two things: what they know and how sure they are that they know it. Two equally knowledgeable players can finish with dramatically different outcomes based entirely on how they assess confidence and risk under pressure.

Blending compelling trivia, psychological tension, and strategic decision-making, **RISK vs. REWARD** creates a viewing experience where audiences naturally play along, asking themselves not only *"Do I know the answer?"* but also *"How much would I risk on being right?"*

Knowledge gets you in the game. Confidence determines the outcome.
