

RISK vs. REWARD

How much would you bet you're right?

1-Hour Studio Game Show

Players: Solo Contestants or Couples

Prize Range: \$0.01 to \$1,000,000

LOGLINE

Contestants answer trivia questions—but before locking in an answer, they must decide how much they trust their choice. That decision determines how much they can win or lose and permanently shapes their path toward a \$1,000,000 prize.

CONCEPT

RISK vs. REWARD is a trivia game where knowledge is only part of the challenge.

For every question, contestants first see the question and multiple-choice answers. Then they use a real-time slider to set how confident they are in their chosen answer.

That single decision determines:

- how much they can win if correct
- how much they can lose if wrong
- and how much of the \$1,000,000 prize path remains available later in the game

Higher confidence increases both reward and risk while preserving access to the top prize. Lower confidence protects against loss—but permanently reduces future earning potential.

Every question reshapes what is still possible.

HOW IT PLAYS

- 12-question studio game (no elimination)
- Contestants choose from multiple trivia categories
- Question and answers are shown before confidence selection
- A dynamic slider sets confidence for each question
- Real-time visuals update winnings, risk, and remaining max prize path
- Correct answers build earnings based on confidence level
- Incorrect answers reduce future earning potential
- One “Do Over” lifeline per game (first half only)

Each decision visibly changes the contestant’s financial trajectory.

THE STRATEGY

Winning is not just about knowing answers—it is about knowing how much to trust your answer.

Players naturally fall into:

- **Conservative:** protects against risk, limits upside
- **Aggressive:** maximizes upside, accepts volatility
- **Calibrated:** matches confidence to knowledge to preserve strongest path forward

Two equally skilled players can end with dramatically different outcomes based purely on confidence decisions.

COUPLES MODE

Two contestants play together, jointly deciding both the answer and confidence level.

This creates constant negotiation under pressure—where disagreement over certainty often becomes more important than the trivia itself.

HOST ROLE

The host guides viewers through the consequences of each decision in real time:

“They got it right—but that level of confidence just changed how much they can still win from here.”

WHY IT WORKS

RISK vs. REWARD turns trivia into a test of confidence under pressure.

- Every question combines knowledge and decision-making
- Viewers naturally compare their own confidence to contestants
- Early decisions shape the entire game outcome
- Multiple winning levels create consistent payoff moments
- Real-time visuals make strategy instantly readable
- Couples Mode adds relationship tension and conflict

At its core, the show is not about answering questions—it is about deciding how much you trust your own answer when money is on the line.

PLAY THE DEMO

A fully interactive prototype demonstrates the complete game system in real time.

Players select categories, view questions and answers, then use a dynamic slider to set confidence before locking in decisions. The system instantly updates winnings, risk exposure, and remaining prize potential.

Includes multiple question sets and a functional “Do Over” lifeline.

TAGLINE

Knowing the answer is only half the game.
Knowing how much to trust it wins the money.
